

# Food, Beverage and Aerosol Canning

**Clients:**  
Coca Cola,  
P&N Beverages  
Nestle  
Bushes Pet Foods  
Amcors

**Locations:**  
Australia –wide

**Value:**  
Up to AUD\$500,000

**Reject can systems, Magnetic conveyors and elevators, De-Palletisers, mass flow conveyors, carton packers, infeed lines, de-loaders, divert tables,**

## ***Our capability***

Australis Engineering has been designing and installing special purpose materials handling equipment since 1983, with canning capabilities in the food, beverage and aerosol industries forming a large part of our success.

Our track record includes large projects such as the design, manufacture and installation of a 1,000 can per minute production line for Coca-Cola. Our strong experience and track record in this market segment extends to all areas of the food, beverage and aerosol manufacturing and packaging processes. Australis has designed, manufactured and installed equipment such as magnetic conveyors and elevators; infeed lines; accumulation conveyors; carton packing machines; palletisers; de-loaders; divert tables; carton roller conveyors and reject can systems.

Some examples of Australis Engineering's track record for clients in these industries:

- Designed, manufactured and installed a special purpose palletiser for Bushes Pet Foods that loaded metal pet food trays and small round cans into trolleys prior to their processing through a retort. The project also included a de-loader after the 'cooking' process.
- Designed, manufactured and installed a 1,000 cpm canning line for Coca-Cola Northmead. The project included design of mass flow conveyors and diverters into a two-line packing stream. Our design also included a reject can system and a carton roller conveyor feeding into Coke's palletisers.
- A complete overhaul and strip-down of an existing beverage can-filler for P&N Beverages. Our role included a full overhaul and maintenance check that was performed outside core business hours to ensure minimal disruption to the client's production schedule.
- Designed, manufactured and installed an empty steel can line system for Bushes Pet Foods to feed their filling machines. The design included accumulation conveyors that provided the infeed into a carton packing machine.
- Designed, manufactured and installed a divert table for Nestle's coffee can production line. The diverter was located after the check-weigher and incorporated both a reject and product sampling functionality.
